Re: Hurricane Repairs to Harborview Condominiums Phase II – 500 Lake Marina Ave.  
FAVCON - #1514

Gentlemen:

I spoke with Randy Ferrell, The City Electrical Inspector assigned to Harborview Condominiums, this morning about what will have to be done to get individual meters for units. Below is a list of things that must be completed to accomplish this goal.

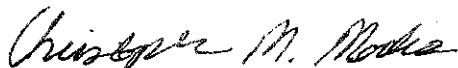

1. Electrical Room must be finished and pass inspection. This includes the transfer switch as well as the power connected from the front, the emergency power.
2. All common areas must be completed and pass inspection. Some examples of the common areas are walkways and corridors, parking garage, and stairways.
3. The city must then clear the building for occupancy.
4. Individual units must then be finished and pass a final electrical inspection. This will include having all electrical outlets, switches, light fixtures, plate covers, and etc. installed.
5. Once a unit has passed a final inspection a meter will be individually released to that unit as long as Items 1, 2, and 3 of this list have been completed. If these have not been completed and a meter has been obtained that unit still will not be energized until Items 1, 2, and 3 have been completed.

*This is a go by list and the city has the discretion to change this at any time.*

The Electrical inspector has also informed me that there will be no temporary meters allowed for this job.

Kindly advise if you have any questions relative to this proposal.

Sincerely,

FAVALORA CONSTRUCTORS, INC.
